PROVIDE BETTER SECURITY

It's three weeks before an election, political fever is running high and a massive rally is planned. The communications director must ensure that his officers and security personnel have two-way radios and batteries that will keep working. Using the Motorola IMPRES Battery Fleet Management system, the department can automatically detect and replace all batteries that are unable to hold a full charge, enabling security to coordinate efforts to secure the event through a long day of crowd control.

MICROPHONES

GPS II REMOTE SPEAKER MICROPHONE

The GPS II microphones are engineered to significantly improve safety and response time. With increased accuracy to within 15 meters—95% of the time—and with polling rates as low as 30 seconds, they automatically track your people by satellite, anywhere outdoors. Programmable polling lets you determine how often to track your responders to better optimize accuracy, battery life and channel traffic. These GPS II microphones utilize power directly from the radio, so they never need to be charged separately. Both models have a channel selector, programmable button, emergency button and volume control.

For XTS 2500: Models I, 1.5, II, III and Rugged. XTS 2500 radios must have Tanapa version B hardware and a radio host code of R10.00.00. For XTS 5000: Models I, II, III and Ruggedized. Radios must have a radio host code of R06.01.00 or later.

CASES AND CARRY ACCESSORIES

LEATHER AND NYLON CARRYING CASES

Motorola carry cases were developed to meet the demands of public safety and other users who operate in the most rigorous of environments. A variety of carrying accessories are available for comfort and convenience and are available in sizes designed to fit radios with a battery and permit audio to be heard clearly. Leather cases are constructed of top grain, 8 ounce leather and all stainless steel hardware.

High-activity cases have a swivel D-ring button and belt loop. To remove case from belt loop, rotate case 180 degrees and slide case upward, out of the holder. Case stays on belt more securely in high-activity applications while allowing the radio to swing freely with body movements.

²International Protection (IP) is a global standard for rating dust and water protection. The first digit IP5x or IP6x represents increased levels of dust protection, while the second digit IPx7 represents withstanding submersion in 1 meter of fresh water for 30 minutes.

³Rugged batteries exceed industry standards (IPx7) for submergibility and provide a higher level of water protection—MIL-STD-810E, Method 512.3 Immersion. These accessories and batteries meet the incremental requirement of submersion in 1 meter of fresh water that is 27°C colder than the product.
